## 1. GATE ARRANGEMENT

You must do some checks on the gate to see if fitting a FIELD system is possible:

- A.** (Make sure that) the fixed and moving parts of the gate are strong and non-deformable;
- B.** the weight of each gate leaf must not exceed 300 kg (Field Fast), 800 kg (Field Oil/Field Oil 24V), 350 kg (Field Oil Plus);
- C.** the hinges and general structure must be in good condition and the gate must move smoothly throughout its travel;
- D.** the upper hinge alone is sufficient to install the unit; those which are unnecessary can be eliminated (the lower and that in the middle if exists);
- E.** in case of leaf length superior of 1,8 m and 150 kg of weight, it is recommended to fix to the ground a mechanical stop in closing (Fig. 3).

## 2. CARRYING BOX INSTALLATION

**2.1.** The hole which contains the carrying box must have the approximate dimensions mentioned in Fig. 4.

For a correct placing, it is obligatory to follow closely the quote of 47 mm which corresponds to the minimum distance of the rotation axis from the pillar.

**2.2.** Inside the excavated pit you have to plan:

**rain water drainage;**

a water waste pipe in PVC of about 40 mm of diameter to put inside the provided hole of the box before it is concreted (Fig. 5). **It must be brought until the drain of the sewer line;**

a sheath for the passage of electrical cables of about 20 mm of diameter which must be brought to the proximity of the electric connection box (Fig. 5).

**2.3.** Before concreting the carrying box, use a level to make it perfectly horizontal to the ground (Fig. 6) and perpendicular to the axis of the gate (Fig. 7).

The axis of the upper hinge of the gate must correspond exactly to the axis of the carrying box shaft.

Follow the distance of 64 mm closely between the carrying box cover and the base of the gate.

**2.4.** Insert the ball into the perforated shaft (Fig. 8)

2.5. Insert the handle bar device into the perforated shaft (Fig. 9)

Fig. 9

2.6. Grease plentifully the hole A and insert the leaf device (Fig. 10)

**Grease the whole with the special greaser until the grease comes out of both sides. ▲**

Fig. 10

2.7. Insert the cam of the limit switch into the handle bar and fix it with the special screws (left-hand side mounting Fig. 11, right-hand side mounting Fig. 12)

**N.B.: During the insertion of the units lubricate them with the supplied grease (Fig.8, Fig.9, Fig.10).**

#### LEFT-HAND SIDE MOUNTING

Fig. 11

#### RIGHT-HAND SIDE MOUNTING

Fig. 12

### 3. LEAF ASSEMBLING

**Before installing the gate make sure that the concrete has hardened into the foundation hole.**

3.1. Position the leaf of the gate on the leaf device making reference to the rotation axe of the leaf hinge (Fig. 13);

Fig. 13

3.2. Weld with care the leaf device to the leaf of the gate realizing a tract fixation of ca. 3-4 cm along the surface of the contact, avoiding the welding next to the threaded holes, furthermore it is necessary to respect the perpendicularity to the axe of rotation (Fig. 14)

Fig. 14

3.3. Be careful not to place the leaf outside the axis (Fig. 15 and 16), but make sure the shaft corresponds to the hinge rotation axis remembering that the minimum distance from the pillar is 47 mm (Fig. 17).

Fig. 15

Fig. 16

Fig. 17

## 4. INSTALLATION OF THE OPERATOR

4.1. It is important to distinguish the right hand and the left hand side operator, anyway the motor must always be turned against the opening side. Make reference to Fig. 18.

Fig. 18

4.2. Introduce manually the operator into the inside of the carrying box (Fig. 19-20) and fix the operator with the 4 screws of the box using the furnished washers and nuts.

### LEFT-HAND SIDE MOUNTING

Fig. 19

### RIGHT-HAND SIDE MOUNTING

Fig. 20

4.3. Connect the handle bar device to the motor using the counter-connecting rod through the special holes.  
Note: Grease very well the holes and respect the direction of insertion of the counter-connecting rod (Fig. 21).

Fig. 21

## 5. MOUNTING OF THE RELEASE

For the Field there are foreseen two types of release: **RELEASE** (with personalised key) and **RELEASE PLUS** (with DIN key).

### RELEASE

5.1. Grease the hinge (A) and mount the release system under the leaf device using the 4 furnished screws (Fig. 22)

Fig. 22

### RELEASE PLUS

5.2. Grease the hinge (A) and mount the release system under the leaf device using the 5 furnished screws (Fig. 23)

Fig. 23

Carry out the electrical connections to the control unit as described in the instructions supplied with SEA control unit.

## 6. LIMIT SWITCH ADJUSTMENT

For the limit switch adjustment in closing and in opening execute the following operations:

### Limit switch in closing

Even if in closing there are limit switch stops mounted on the ground it is necessary to adjust the limit switch of the Field, operate as follows:

6.1. Close the leaves completely

6.2. Mount the cam of the limit switch as shown in Fig. 24, bring it to the stop with the connecting rod and fix it with the special screws.

The mounting of the cam and its adjustment is shown in Fig. 25 and 26.

6.3. Adjustable limit switches in closing ( from 85° to 95° degrees)

Fig. 24

Fig. 25

Fig. 26

### Limit switch in opening

It is recommended to have limit switch stops on the ground in opening, if already installed, it is not necessary to adjust the limit switches present on the Field.

If there are no limit switch stops in opening on the ground, operate as follows:

6.3. Open the leaves completely (1) and bring them back of about 10° (2) (Fig. 27).

Fig. 27

**6.4.** Unscrew the nuts A and B, turn the cam with the counter-connecting rod until it reaches the stop and relock the nuts (Fig. 28)

In case of a not perfect positioning of the leaves in opening, it is possible to adjust the position through the cam.

Close the operator with the cover using the 4 enclosed screw.

After ending all the operations in the installation of the above mentioned carrying box, of the gate and the operator, try to do some moves slowly by hand verifying that there are not irregular frictions and that the movement is uniform for the whole range.

**Notice:** to do this last operation, release the operator as described in the next paragraph.

**When putting in function the installation it is peremptory to lubricate the box as in Fig. 11 until the grease comes out. (Use grease type DIN 51502 KP 2 N-20 - K 2 K-20).**
